

How to Embed a PDF File

An Easy Solution

Using the <embed> tag is probably the simplest way to add pdf to your website. However, PDF embeds are not supported on some browsers (ahem, ios safari...).

You can choose to write your own PDF viewer using the PDF.js library, but it is a lot of work.

Mozilla already has a pretty good implementation of PDF viewer. So we can add an iframe pointing to Mozilla's PDF viewer page 💡

```
<iframe src="https://mozilla.github.io/pdf.js/web/viewer.html?file=your-file-url.pdf" />
```
